

Freelance Flow

Nico Swenson

Base 44

1. Project Overview

App Name: FreelanceFlow (Placeholder) **Objective:** A streamlined financial tracker that allows freelancers to log income and expenses with minimal friction, providing instant visibility into their net profit.

2. Information Architecture (IA) & Navigation

To respect Jakob's Law (users prefer your app to work like others they know) and the Pareto Principle (focusing on the 20% of tasks used 80% of the time, the app uses a standard bottom-navigation bar.

Core Map:

Dashboard (Home): Summary of totals (Income, Tips, Expenses).

The "Plus" Action (Pareto Focus): A central, prominent button to "Add New Entry" (Income or Expense).

Reports: Detailed annual, quarterly, and monthly breakdowns.

Settings/Profile: Tax info, payment method defaults, and data export.

3. Feature Specifications

A. Income Entry Log

Event Title: Text input (e.g., "Web Design Project").

Date Picker: Defaulted to the current date.

Payment Method: Multi-select/Dropdown (Bank Transfer, Cash, PayPal, Stripe, etc.).

Payment Amount: Numerical input.

Tips: Separate numerical input (auto-adds to the total income).

B. Expense & Receipt Capture

Receipt Upload: A dedicated module using the camera or file gallery.

OCR (Optical Character Recognition) Goal: AI should attempt to read the total, but provide a Manual Total Input for verification.

Category Tagging: Simple tags (Software, Travel, Supplies).

C. Reporting & Analytics

Toggle Views: Tabbed navigation to switch between Monthly, Quarterly, and Annual views.

Visual Cards: * Total Gross Income (Payment + Tips).

Total Expenses (Receipts).

Net Profit (Income - Expenses).

4. UX & Design Principles

Jakob's Law & Mental Models

The "Plus" Button: Use a floating action button (FAB) for adding entries, as seen in Google Workspace or Instagram.

Claude

I was building an app that I could use on my phone for Freelancing using a simple PWA widget. I ran into a point where it was bugging out, especially around some bad aesthetics and editing features. I couldn't get it to edit a date and then move then event on the calendar for example. I asked it to create a PRD from what we have done so far: Overview FreelanceFlow is a mobile-first web app for freelancers to track income, expenses, tips, and manage their calendar. It provides a clean financial dashboard, detailed reporting, and project-level insights — all in one place. User Roles

Single user (freelancer) — authenticated via the platform's built-in login. All data is private to the logged-in user. Core Entities Transaction FieldTypeNotestypeenum: income /

Brief description of what the app does

Dashboard (/) Purpose: Financial snapshot at a glance. Features:

4 stat cards: Total Income, Tips Earned, Total Expenses, Net Profit

Tapping a stat card opens a Stat Detail Modal listing the transactions that make up that total

Recent Transactions list (last 5)

Tapping a transaction opens Transaction Detail Modal (view + edit + delete)

Quick "Add New Entry" button → navigates to Add Entry page

Pull-to-refresh support Data: Aggregates ALL transactions (not period-filtered).

Add Entry (/AddEntry) Purpose: Log a new income or expense transaction. Tabs:

Income tab: title, amount, tips, date, payment method, project/client, notes

Expense tab: title, amount, date, category, project/client, link to income event, receipt upload (with OCR auto-fill), notes Flow:

User fills form and submits

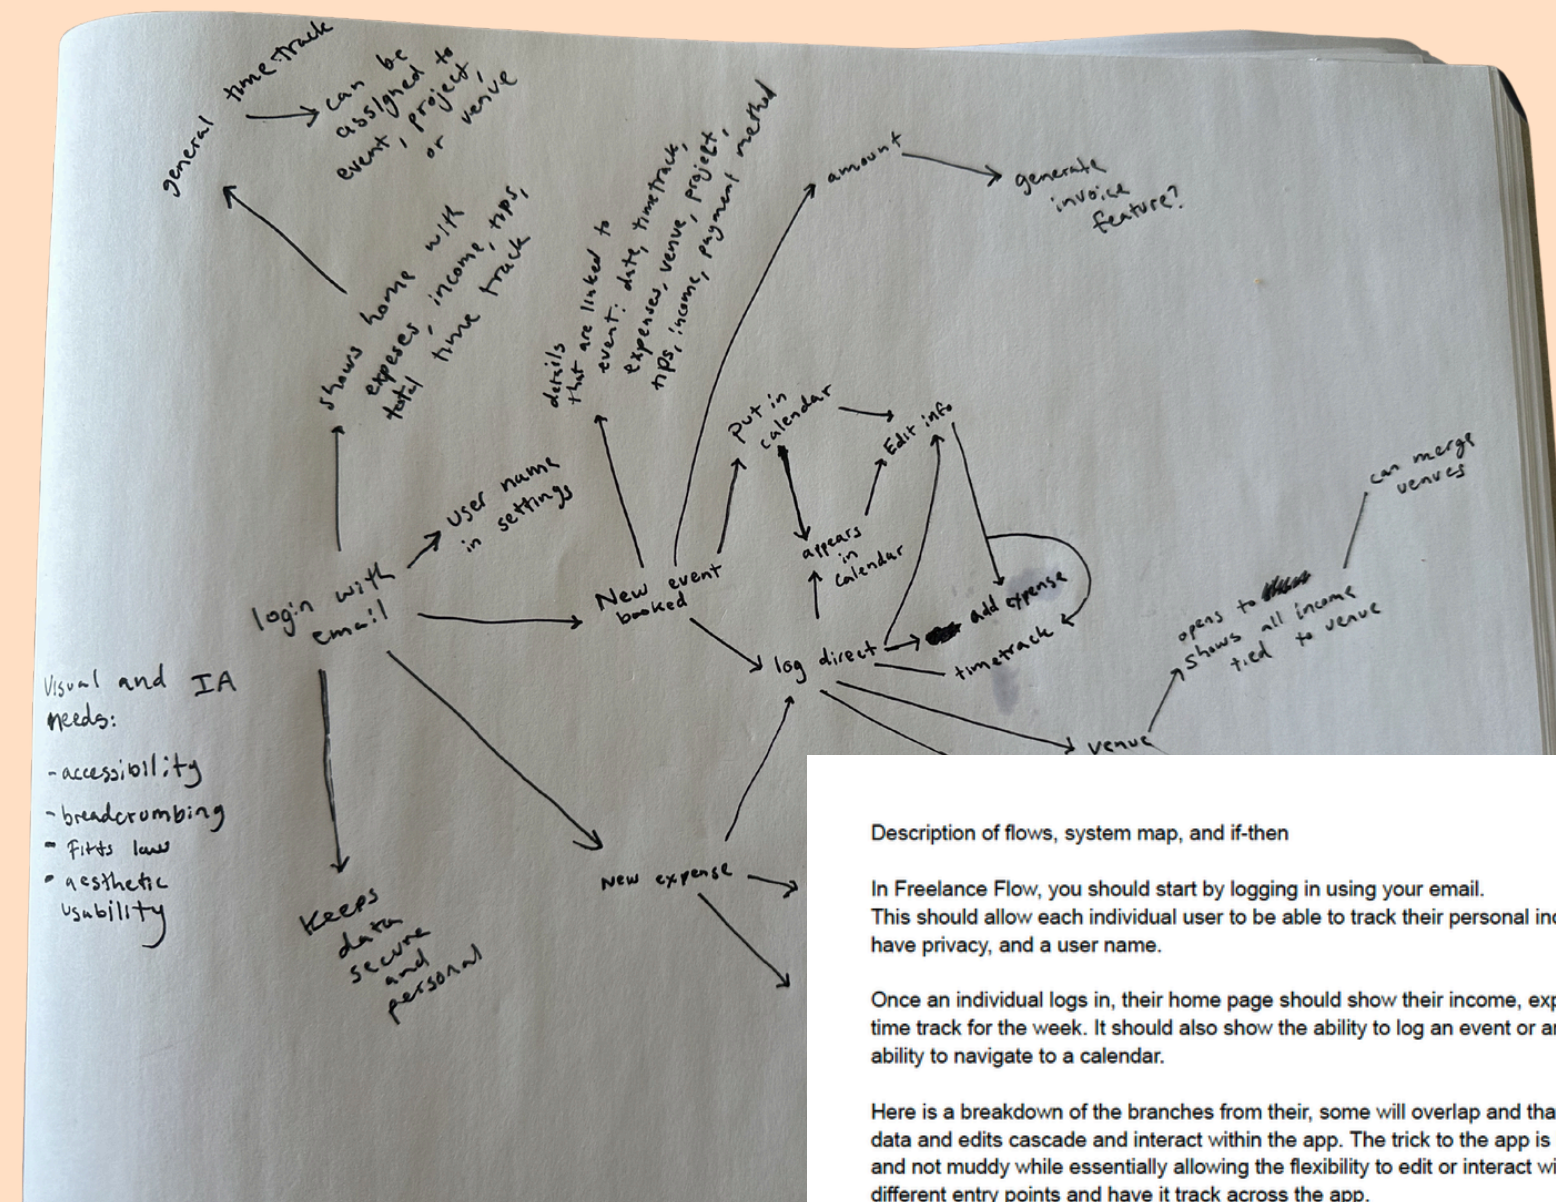

Transaction saved to database

If income: a corresponding CalendarEvent is auto-created on the same date

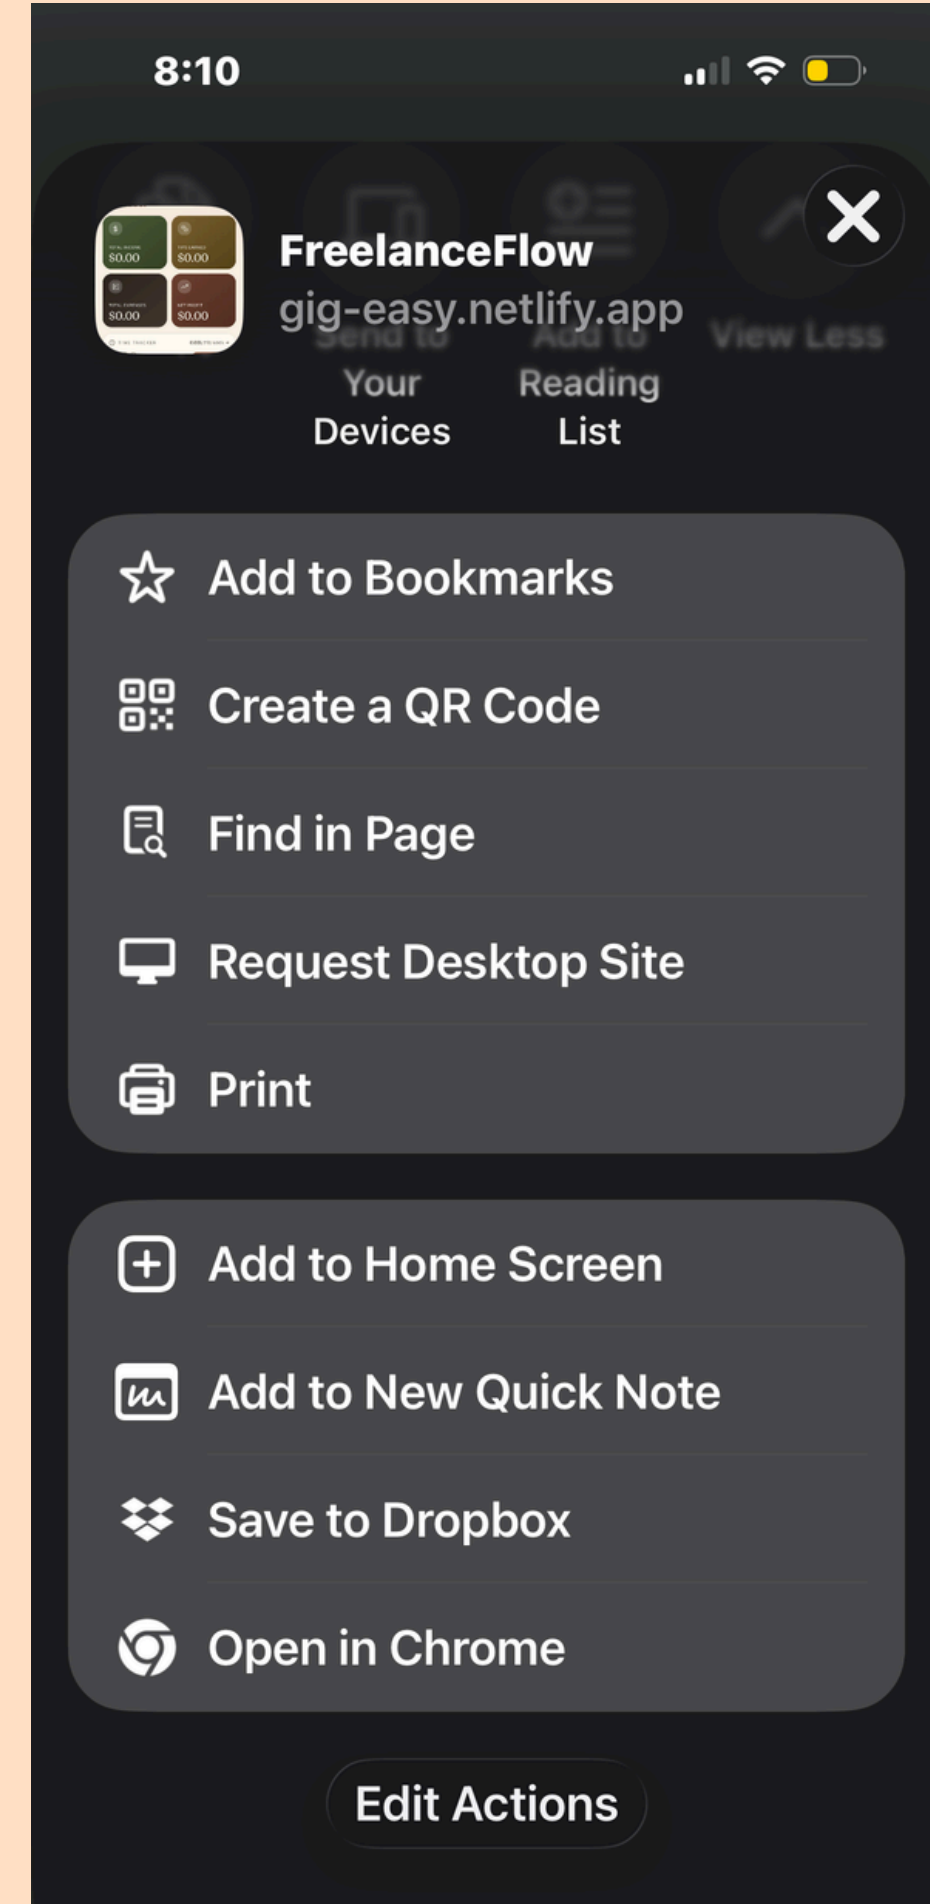

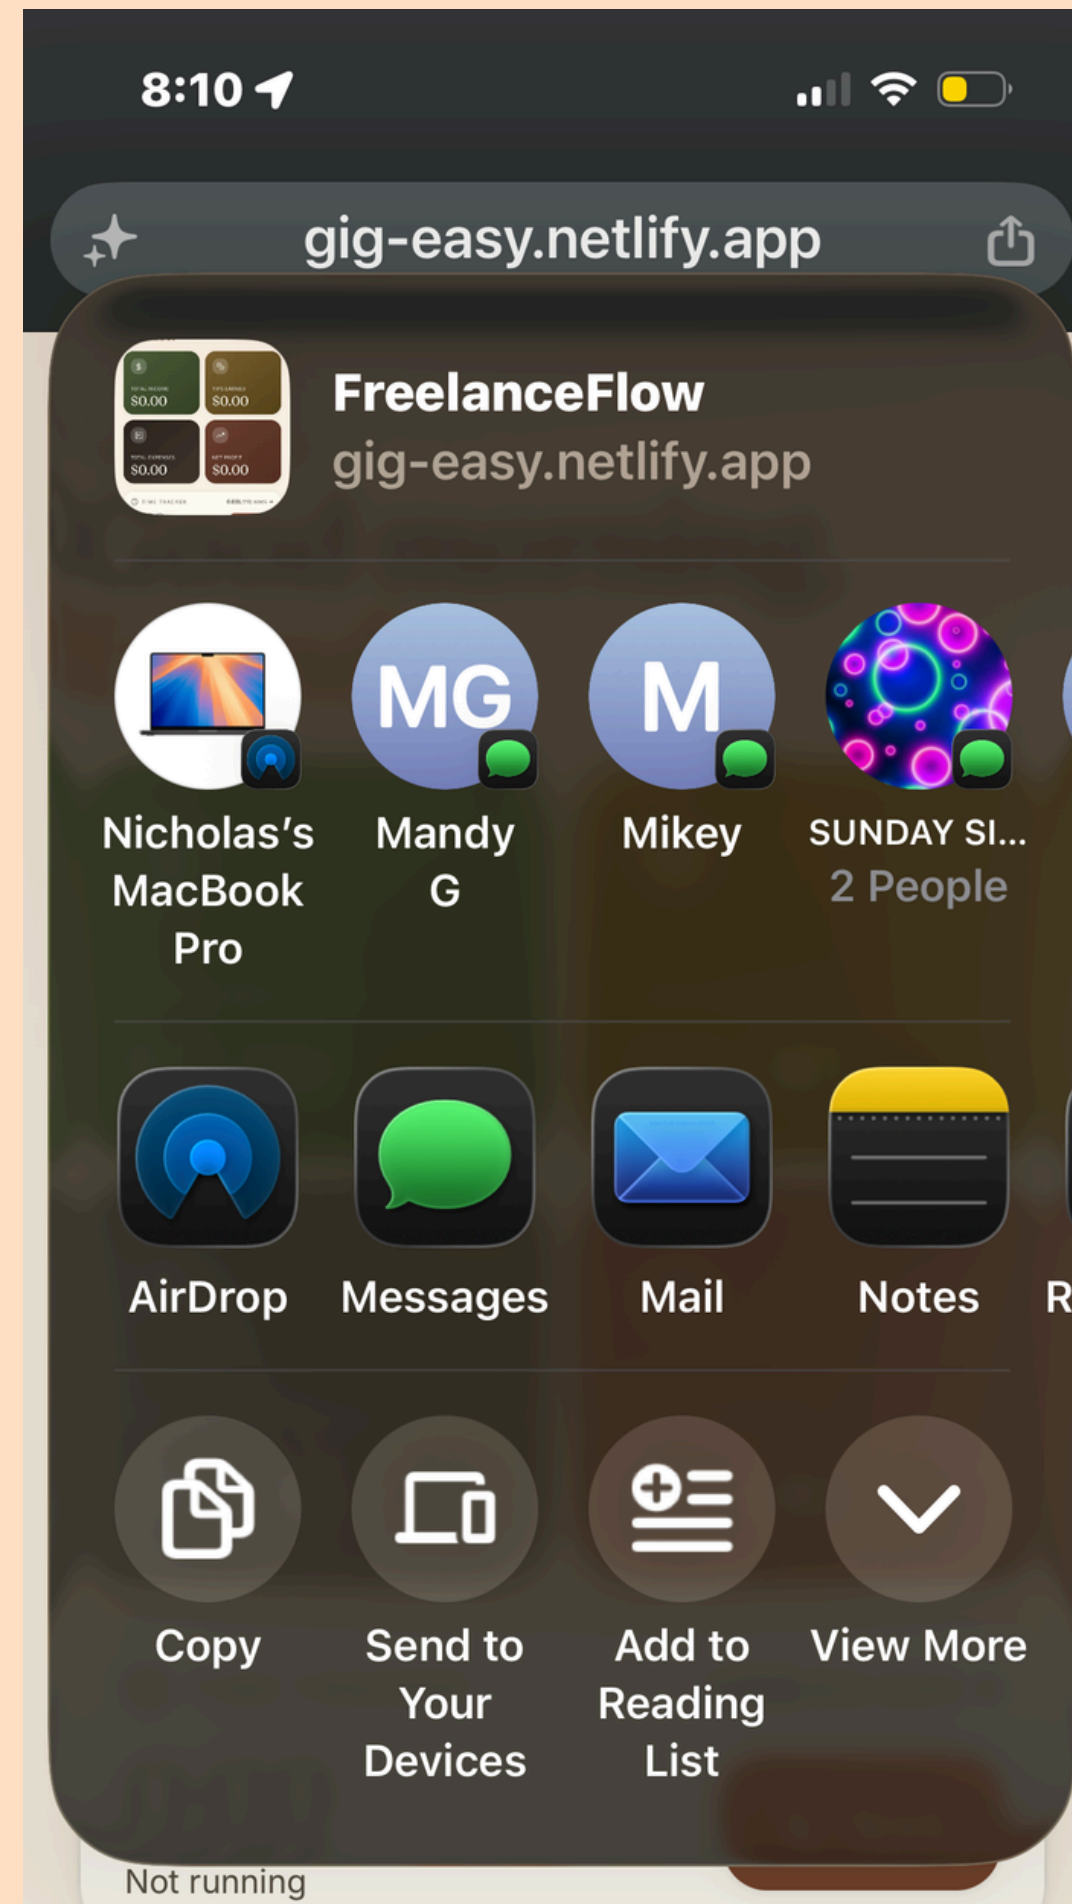

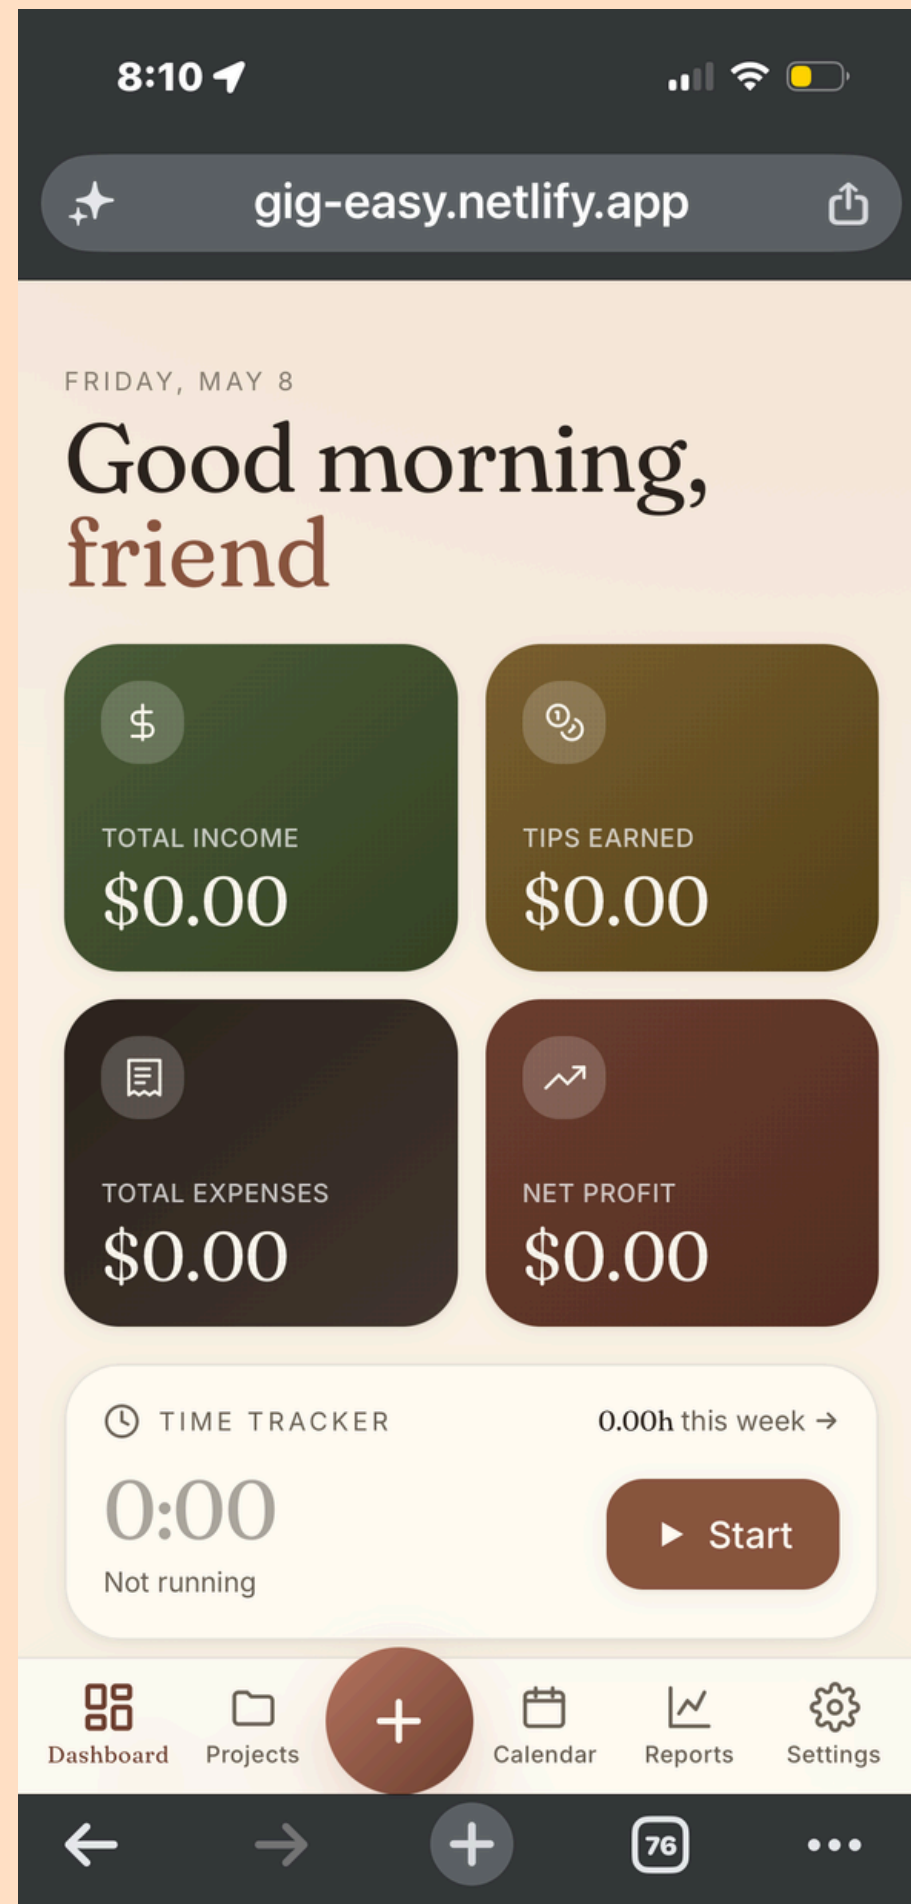

Success message shown, then redirect to Dashboard after short delay

Calendar (/Calendar) Purpose: Visual monthly calendar showing events and income entries. Features:

Month grid view with prev/next navigation

PWA (Progressive Web App)
